

CONFIRMATION DAY IN SENATE ALREADY BOTHERS OFFICIALS

Some of Governor Pinkham's 'Cabinet' May Experience Trouble in Securing Endorsement

MCCARTHY'S CHANCES SUBJECT TO HIS ACTIONS

Hawaii Fair Commission Likely to Cause Division on Name of John Effinger

Although the next session of the legislature is two months off, there is already considerable talk in political circles over the possibilities in connection with the confirmation or failure of confirmation of Governor Pinkham's appointees.

Under the custom obtaining heretofore the Governor will likely send to the senate a list of his appointees early in the session. The senate may or may not take action in the interim, but it will not take up action on the confirmation until late in April, probably on the eve of its adjournment. This has been the practice during the last three or four sessions.

Five of Governor Pinkham's 'cabinet members' will have their names before the senate for confirmation, and then there will be the names of between fifty and a hundred members of different government boards who have been appointed by Governor Pinkham since he took office early in January.

The 'cabinet' officers whose names will go before the senate for confirmation are Ingram M. Stainback, attorney general; Henry W. Kinney, superintendent of public instruction; William P. Jarrett, high sheriff and warden of Oahu prison; Charles R. Forbes, superintendent of public works, and Charles J. McCarthy, treasurer of the Territory.

Some feel safe. From what can be gathered from a number of members of the next senate and generally around political circles, it appears that but little opposition, if any at all, will be made manifest over the confirmation of Stainback and Jarrett. That some opposition will be made in regard to Kinney and Forbes, and more particularly in regard to the latter, is apprehended, but those on the inside believe that both will pull through. In the case of Colonel McCarthy much depends, it is believed, on the manner and matter of his appointment of island assessors and approval of the appointment of their deputies by the assessors.

McCarthy is a Democrat. The recent displacement of R. T. Forrester as assessor of Hawaii and the appointment of T. Shipman in his place, will, any other than political reason, is said to be something that a number of senators, especially some of those from the Big Island, will certainly look into. The practically certain ouster of Deputy Assessor Keola of Waiala is also something that the territorial delegation will likely look into. A kick or two to register, and they are two things also that the out- may halt over when Colonel McCarthy's name comes up on confirm: tax stay in the senate.

Treasurer Whitely, too. It is generally believed, however, that Treasurer McCarthy will not make any further show in the territorial department, stream now and the adjournment of the senate in April. Probable changes in this department will be few and far between from now on, it is believed.

The story is that McCarthy will re-take in no uncertain manner in the event that City Treasurer Conkling makes a clean sweep when he assumes office at the beginning of the year. The situation is altogether a different one, say politicians. McCarthy is subject to confirmation at the hands of a senate which contains a working Republican majority, while Conkling will have back of him and his actions a major and powerful Republican majority. McCarthy will, therefore, say political experts, go slow in the matter of retaliation.

But little pillkiki is expected when the confirmation of members of different boards will come up in the senate, except in two or three cases. The greatest lot of pillkiki likely to come about will be in the case of the Hawaiian Fair Commission, two of whose members have been appointed by Governor Pinkham.

Some Commissioners Not Safe. Taken together with the fact that Governor Pinkham has never been a patron saint of Hawaii's coming exhibit in San Francisco next year and that considerable dissatisfaction has recently been expressed in many quarters over the pickings and doings of some of the members of the commission, it is believed that the senate will likely fail to confirm a number of appointments on this board.

H. P. Woods (chairman), J. N. S. Williams and John H. Wye are 'out of the woods', as the saying goes, for they were confirmed by the last senate, but John Effinger and B. G. Riverburgh were appointed by Governor Pinkham long after the last senate adjourned. In the case of the former, Effinger, considerable doubt is expressed as to his being confirmed, and Riverburgh will find some difficulty, but not of an insurmountable nature, it is believed.

THE CHILDREN'S COLDS. Watch the children's colds and cure them before they weaken the vitality. Use Chamberlain's Cough Remedy freely. It is perfectly safe. It has been tested by chemists and pronounced free from injurious substances and costs but a trifle. For sale by all dealers. Benson Smith & Co., agents for Hawaii.

ANTI-TUBERCULOSIS LEAGUE TO EXPAND Will Be Reorganized on Larger Scale Than Ever to Ex- tend Its Work

Unless there be a very considerable number of deaths from tuberculosis over the normal during the coming six months, the general death rate will show a substantial decrease over the previous years, according to the report read by Dr. A. N. Sinclair, superintendent of the Anti-Tuberculosis League at the annual meeting of the league yesterday afternoon in the rooms of the chamber of commerce. The death rate of the first six months of the present statistical year have been far below the average, so much so that the bureau is able by comparative charts to show the practical success that is attending the work against the white plague.

League Will Expand. The league at yesterday's meeting debated the question of whether to enlarge the membership of the organization or whether to go out of existence as a league altogether. The reason for the latter suggestion is that the three parent organizations which organized the league have themselves ceased to exist as such—the Hawaiian Red Cross, the chamber of commerce and the merchants' association. It was decided not to discontinue, however, but to reorganize on a larger scale, the details of which were left to the executive committee to work out.

Stamp Sale a Success. The report of the sale of Red Cross stamps was received with enthusiasm, the result reported being so much better than had been expected. Altogether the sale returned \$700 more than the year before, despite the many calls that have been made upon the community for other charitable purposes. A vote of thanks to Mrs. W. P. Dillingham and her willing assistants was passed.

The money realized, after deducting the share of the National Red Cross Association and the small expense of the sale, was divided by vote between the Leahi Home and the Pa Ola day camp.

INFLUX OF WOMEN MUST BE CHECKED. Doctor Nippon Proposes Crusade Against Importation of Vice From San Francisco

Learning that Honolulu's undesirable, as counted by the population of Twilio, is to be increased by more than a hundred with refugees from San Francisco's "red light" district, Rev. John W. Wadman, D. D., of the Anti-Saloon League and a leading social worker, made a demand upon the police last night that the law be enforced and these women be prohibited from engaging in their illicit practice here.

According to reports around the police station, a number of these women will arrive during the week as the advance guard of the hundred or more that will be here before the month is over. San Francisco's vice district was closed on December 15, which accounts for the impending influx of undesirable here.

The feeling against "the district" in San Francisco increased steadily as the time of the Panama-Pacific exposition drew near. Following the November election it was announced that the red light dwellers must get out of the city by December 15—end of them. "We should be in arms against their appearance here!" exclaimed Doctor Wadman last night. "I have taken the matter up with the police myself and will not rest until I have seen that everything possible has been done to prevent their evil influence being felt here."

Twilio, anticipating their coming, is now agitated by eight new cottages, which may be rented by these women. LAW MUST BE ENFORCED. Doctor Wadman declared his determination to see the law enforced and these undesirable put into jail or shipped out of the Territory before they have had time to exert their demoralizing influence upon the community. He recommended that the ministers of the city get together at once and join in protest against what he characterized as an outrage upon the city. He declared, also, that civic organizations of the city should take the problem up and see that the police enforce the law.

There are territorial and federal laws fully and partially covering this case. The territorial law makes the practice of prostitution punishable by fine or imprisonment. Under the federal law the newcomers might be reached under the theory that they are "undesirable alien citizens" and deported or simply punished, as in the case of the local law.

The case of Nettie L. Scott against R. N. Filipo and others was argued and submitted in the supreme court yesterday. Three new cases were placed on the calendar of the supreme court yesterday: McBrade Sugar Company against Manuel Andrade, appeal from the Kauai circuit court; Elizabeth Kapaka Ellis against C. W. Spitz, exceptions from the Kauai circuit court; and Thomas Holstein against Paul H. Benedict, administrator of the estate of Kelope Silva, deceased, error, Maui circuit court.

HIGH EDITOR ATTACKS 'JJI' AS DETRACTOR

Fred Makino Says Organization of Japanese Association Will Proceed Despite Opposition

CONTEMPORARY BLAMED FOR PUBLIC ATTITUDE

Society Will Benefit Employers and Workmen in Many Ways, Says Journalist

Fred Makino, owner and editor of The Hawaii Hochi and one of the most prominent among the organizers of the proposed Japanese Association of Hawaii said yesterday afternoon that the reported withdrawal of support of the Japanese Merchants' Association would in no wise retard the speedy organization of the Territory-wide Association of Japanese.

"The statement to the effect that the association was in danger of being broken up in consequence of the Japanese Merchants' Association refusing to join it," said Mr. Makino yesterday, "is utterly erroneous and without foundation. As to the furthering of the Japanese Association, refusing to join the Japanese Association, the majority of the Japanese residents have refused to back our society, I believe that also is without foundation and has been given out with the purpose of doing damage to us."

General Disparagement. "The Japanese Merchants' Association is not the powerful or influential organization among the Japanese that the chamber of commerce is among the citizens here, and with or without the co-operation of the merchants' association, we will go ahead with the organization to its completion. The organizers are confident of their strength and the trust reposed in them by the Japanese here. Further, it is also a common-sense thing, more, and I want to emphasize the point particularly, this organization of ours is not being promoted for the purpose of stirring up discontent among the laborers employed on the plantations. It will be found that the aims of the organization, if carried out, will work a benefit to the capitalists of Hawaii."

"The principal work which the organizers of the Japanese Association have in view, and which we intend to immediately carry out, is to remove legal and other obstacles placed in the way of immigrants arriving here from Japan by the government of the United States. The proper treatment of Japanese immigrants is a subject which will be brought up. It is the furthering of the proposed Japanese Association, we will encourage generally the assimilation of American civilization by the Japanese and teach them the true value of American institutions."

Blame Nippon Jiji. The Nippon Jiji is responsible for the statements which were made yesterday, regarding the failure of this proposed organization. In the early period of the European war, this paper published a statement, declaring war had broken out between America and Japan. Now if a strong organization like the proposed Japanese Association is formed, we can easily counteract the effect of such injurious news, as we will be in a position to get our news from authentic sources.

In conclusion let me say that this organization is not a labor organization under another cloak. Our work will go on and will be completed in the near future, and will be mutually beneficial instrumentally to the Japanese as well as the capitalists of Hawaii. The statement which was given publicly seems to be based on an article which the Nippon Jiji intended to publish in its Sunday issue. This is exactly the same statement which is being circulated by some interested parties for private reasons. The public may rest assured, however, that this association will before long lay a golden egg."

JOHN WISE NOT AFTER
CLERKSHIP OF SENATE
Prefers Kapiolani Park Superintendency and Cannot Hold Two Political Jobs

John Wise will step aside as a candidate for the clerk of the senate. This he announced yesterday, to the surprise of several, who had looked upon him as both a candidate for the clerkship and for superintendency of Kapiolani park.

It became evident from what he said that he had been put in a position where he had to choose between one job or the other, and took the place now held by B. G. Riverburgh.

With Wise out of the running for clerk of the senate, several names have come up as possible candidates for the lucrative job, including Bert Lloyd, Henry Roth and William Savidge.

Wise has held the clerkship of the senate for several sessions.

HAWAII VOLCANOES ARE CALLED FEARS

Geological Survey Bulletin Says They Are Abnormal in Many Respects

By ERNEST G. WALKER
(Mail Special to The Advertiser)

WASHINGTON, December 16.—The geological survey has been giving some study to the volcanoes of Hawaii. In a press bulletin, just given to the public, these volcanoes are discussed in interesting terms. The official bulletin says:

"The lofty volcanoes of the Hawaiian Islands, rising above the ocean from 5000 to nearly 14,000 feet, are only the summits of gigantic mountain masses that rise abruptly from the bottom of the Pacific. Mauna Loa, on the island of Hawaii, stands 13,675 feet above sea level, but its slopes descend beneath the sea, as shown by deep-sea soundings, with a grade fairly equal to that of the mountain above the water. The submarine slopes of the other islands, and the depths attained by these continuous slopes, within thirty to fifty miles of the shore, vary from 14,000 to 19,000 feet. Mauna Loa and Mauna Kea, if their true bases are considered to be at the bottom of the Pacific, are therefore mountains of great altitude as Mount Everest, of approximately 29,000 feet. In general the Hawaiian island group consist of summits of a gigantic submarine mountain chain which projects only its loftiest peaks and dome above the water. On the island of Hawaii the volcanic forces are still in operation."

Kilauea Continues Active. "The one continuously active volcanic vent of the island of Kilauea, far down on the eastern flank of Mauna Loa—the great mountain. No other volcano in the world approaches Mauna Loa in the vastness of its mass or in the magnitude of its eruptive activity. There are many volcanic vents higher in the air, but most of them are placed upon elevated plateaus, where they appear as mere cones of greater or less size. It is not yet known at what level the base of Mauna Loa is situated, but it is below the sea—probably far below."

"Mauna Kea—the white mountain—is also a volcano among the canoes. Its summit—13,825 feet—is a trifle higher than that of Mauna Loa, but its slopes are steeper and its base is therefore much smaller. The magnitude of Mauna Loa is due chiefly to the great area of its base, which is nearly elliptical in shape, with a major diameter of seventy-four miles and a minor diameter of fifty-three miles, measured at sea level."

In the aggregate of its eruptions Mauna Loa is also unrivaled. Some of the volcanoes of Ireland have been known to discharge a single outbreak of lava fully equal to those of Mauna Loa. But such outbreaks are infrequent in Ireland, and a century has elapsed since any of such magnitude have occurred, though there have been several minor eruptions. The eruptions of Mauna Loa are all of great volume and occur irregularly, at an average interval of about eight years."

View of the quantity of material it has discharged during the last century, no other volcano is at all comparable to it.

Abnormal Volcanoes. "Mauna Loa and Kilauea are in many respects abnormal volcanoes. The most notable feature is the singular quietness of their eruptions. Rarely are these events attended by any of that extremely explosive action which is characteristic of nearly all other volcanoes. Only once or twice within the historic period have they been accompanied by earthquakes or subterranean explosions. The vast jets of steam blown miles high, hurling rocks, cinders and lapilli far and wide, filling the heavens with vapor and smoke, and falling down ash and fragments over the surrounding regions, have never been observed here. Some action of this sort is indeed represented, but only in a feeble way. The lava wells forth like water from a hot bubbling spring, and it is at nightfall, when the sky is aglow with the fiery fountains, that the observer may stand to the windward of the greatest eruptions, so near the source that the heat will make his face tingle, yet without danger. Ordinarily the outbreak takes place without warning and without the knowledge of the inhabitants, who first become aware of it at nightfall, when the sky is aglow with the fiery fountains, that the observer may stand to the windward of the greatest eruptions, so near the source that the heat will make his face tingle, yet without danger. Ordinarily the outbreak takes place without warning and without the knowledge of the inhabitants, who first become aware of it at nightfall, when the sky is aglow with the fiery fountains, that the observer may stand to the windward of the greatest eruptions, so near the source that the heat will make his face tingle, yet without danger. Ordinarily the outbreak takes place without warning and without the knowledge of the inhabitants, who first become aware of it at nightfall, when the sky is aglow with the fiery fountains, that the observer may stand to the windward of the greatest eruptions, so near the source that the heat will make his face tingle, yet without danger.
